Titan Intrusion Prevention System Combats Flaw in Juniper Firewalls

OASIS TECHNOLOGY RELEASES INFORMATION ON TECHNOLOGY USED TO FIGHT THE VPN FLAW IN JUNIPER FIREWALLS

FOR RELEASE: January 13, 2016

Oasis Technology, Inc., of Camarillo, California recently announced a plug-and-play solution for the Juniper security vulnerability. They announced that their patented architecture not only provides protection for the Juniper firewall issue but also provides protection for all firewalls with architecture similar to Juniper.

"This situation has further demonstrated that CYBER TERRORISM and CYBER HACKING are silent, hidden, stalking time bombs that threaten all Internet connections 24 hours a day, seven days a week. Most companies, corporations, and agencies don't even know that it's happening to them…." said George Baldonado, president and CEO of Oasis Technology, a leading provider of Internet and Network Security and Network Support for businesses.

"As evidenced by the recent attack on the Juniper products, armies of Cyber Hackers from all over the world are targeting our infrastructure, military, data, intellectual property, innovations, our ideas and even our identity information. At their disposal are thousands of foreign computer 'bots' that churn out thousands of hack attempts per millisecond looking to gain a foothold anywhere they can. Sooner or later the targeted network will fold or open up. Once it folds, either the network or application will crash, or worse, the data will be compromised. This affects all companies and agencies that use, store, or access sensitive information."

"By design, firewalls present a logical 'door' that is intended to stop the hackers. However, hackers have become so advances that the firewall 'door' is the target for them to attack and hack. Unlike firewalls, the Oasis Titan Intrusion Prevention System not present any "door" – therefore it cannot be hacked. Titan is invisible to the hackers. The Titan device is a stealth mode product that

connects to the front of your network and stops the silent, multi-pronged cyber hacking attempts, DDOS, HEARTBLEED, POODLE, etc., from even getting to any firewall's 'door' and cannot be detected in the process. I'm confident that if Titan was installed in conjunction with the Juniper firewall, the Juniper attack would not have been successful" says Baldonado.

"Firewalls still play an important part in what they do and are needed. <u>Titan does not duplicate what a firewall does</u>. Titan has patented architecture that enables it to do what traditional firewalls (old and next generation) cannot do" says Baldonado.

Titan is available to new customers immediately. For pricing or other information, contact Oasis Technology at (805) 445-4833.

Oasis Technology is a leading provider of products and consulting services for information technology, security and network systems, serving all industries. For more information about Oasis Technology or Titan, visit the company website at www.oasistechnology.com
